# LICENCE MONITORING DATA MONTHLY SUMMARY REPORT

for

1 February 2016 to 29 February 2016

# **Air Monitoring**

Air quality surrounding the Wilpinjong Coal Mine is monitored using:

- 1. tapered element oscillating microbalances (TEOM);
- 2. high volume air samplers (HV); and
- 3. dust deposition gauges (DG).

In terms of the above equipment:

- 1. the TEOM and HVAS measure fine dust particles up to 10 microns in diameter (i.e. PM10); and
- 2. the DG measure the total dust deposited in the gauge during the sample period.

All are influenced by mining as well as non mining activities in the local area.

The location of the above monitoring equipment in relation to Wilpinjong Coal Mine is shown in Figure 8.

A summary of the monitoring results for the month is provided in Table 1 and the yearly trends are also shown in Figures 1 to 3.

Figure 1a. DG Results - 12 Month Trend

- 1: Limit of 4 g/m2/month (annual average) applies to DG5 (Wollar Village) refer Figure 1b.
- No dust results were recorded in April due to Laboratory error.
   DG13 no longer compliant with AS/NZS 3580.1.1:2007 as DG13 is within 5m of mine operations. DG13 to be removed from EPL

- 1. Limit doesn't apply for extraordinary events such as bushfires, prescribed burning, or dust storms.
- A power outage prevented dust sample being collected from HV1 on 14 September 2015.
   HV5 influenced by dust from Araluen Road generally during stable atmospheric conditions (i.e. dry, temperature inversion

- 1. Limit dosen't apply for extraordinary events such as bushfires, prescribed burning or dust storms.
- 2. Regional dust storm occurred 6 May also elevated regional dust levels December 17.
- 3. Elevated PM10 dust levels recorded mid Feb caused by Totness bushfire and dust from Araluen Lane.

# **Surface Water Monitoring**

Surface water runoff is isolated and diverted around disturbed areas through the construction of water diversion bunds. Runoff from disturbed areas is diverted into on-site water retention dams.

A Reverse Osmosis (RO) Plant treats all water from the retention dams before it is discharged to Wilpinjong Creek. The EPL specifies limits for the quantity and quality of water that may be discharged from the site.

A summary of the monitoring results for the month is provided in Table 2. The continuous monitoring results for pH, conductivity and volume are also shown in Figures 4 to 6.

# **Noise Monitoring**

Environmental noise monitoring ("monitoring") is carried out on a monthly basis.

The purpose of the monitoring is to assess whether mining operations are consistent with the objectives of the EPL and the development consent conditions.

In terms of this monitoring, it is undertaken:

- 1. by an independent noise consultant;
- 2. during the night-time; and
- 3. at the sites shown in Figure 9.

On pages 9 and 10 of this report are the noise levels and findings from the consultant's report.

#### Notes

- 1. Wind speed is sourced from WCP weather station, Vertical Temperature Gradient (VTG) is sourced from the WCP inversion tower;
- 2. Criterion may or may not apply due to rounding of meteorological data values;
- Noise emission limits apply for winds up to and including 3 metres per second at a height of 10 metres, temperature inversion conditions
  between 1.5°C and 3°C/100m with winds up to and including 2 m/s, or temperature inversion conditions up to and including 3°C/100m;
- 4. These are results for WCP in the absence of all other noise sources:
- 5. Bolded results in red are those greater than the relevant criterion (if applicable); and
- NA in exceedance column means atmospheric conditions outside conditions specified in development consent and so criterion is not
  applicable or criterion not specified.

### 6 SUMMARY OF COMPLIANCE

Environmental noise monitoring described in this report was undertaken during the night period of 10/11 February 2016. Attended noise monitoring was conducted at seven sites. The duration of all measurements was 15 minutes.

# 6.1 Operational Noise Assessment

Wilpinjong Coal Project (WCP) complied with noise limits at the monitoring locations during the February 2016 monitoring period.

# 6.2 Low Frequency Assessment

During the February 2016 survey, WCP did not trigger modifying factor penalties for low frequency noise. None of the measurements occurred during which WCP was measurable (not "inaudible", "not measurable" or less than a maximum cut-off value of 30 dB), was within 5 dB of the relevant criterion and where meteorological conditions resulted in criteria applying (in accordance with the project approval). No further assessment of low frequency noise was undertaken.

Wilpinjong Coal received report from Global Acoustics Pty Ltd on 21 March 2016.

# **Blasting**

Monitoring is carried out near sensitive locations during blasting activities to determine the vibration in the air (overpressure) and earth (ground vibration). A summary of the results of this monitoring, and the limits specified in the EPL, are shown in Tables 3 and 4. Figure 7 shows the actual overpressure and vibration levels recorded during the month.

**Table 3 – Overpressure Monitoring Results**
